

● FOR PROJECT MANAGERS, RES, AREA ENGINEERS, AND INSPECTORS

Take back your evenings. Stop chasing **closeout data**.

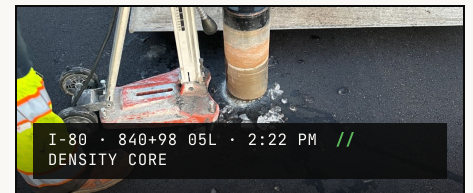

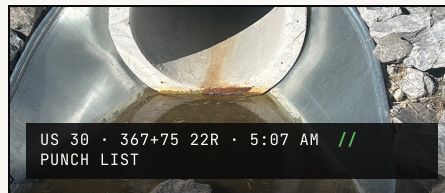

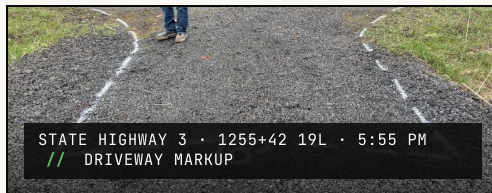

Get what you need from day one to eliminate last-minute drama.

Cut the stress

You know the 11 PM email from the agency asking where the work happened on Tuesday. You know the payment request that came back rejected because the documentation didn't tie the work to a location. You know the 90 minutes after dinner spent rebuilding the daily diary from memory and the foreman's text messages. **You did not sign up for that kind of stress.**

An ounce of prevention is worth a pound of cure

OnStation puts the station on **every phone on the project**. Every flag your crew drops, every photo they take, every form they fill out is stamped with their location and time. The daily diary builds itself from the field data. When the agency asks where the work happened, the answer is right there, and **payment is approved cleanly**. Your closeout is successful because your crews captured data correctly from day one.

CAPTURE PROJECT RECORD WHEN IT HAPPENS

IT'S ALL THERE

When the agency emails at 11 PM, everything they need is right there.

DAILY DIARY = READY TO GO

Every flag, photo, and quantity lands tagged to station, time, and operator.

CLOSEOUT-READY

Make it easy for them to pay you. Nothing to rebuild from memory.

EASY SETUP & SELF-TRAIN

The crew trains itself. First flag drops the same day they install the app.

// YOUR NEXT STEP

Your project is already loaded in OnStation. Start your access period now.

// THE COST OF WAITING

Every day without OnStation is another day crews capture incomplete data for you to chase and fix later. Do Future You a favor.
